## **DETAILED ACTION**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 14, 2006 has been entered.

- 2. Claims 1, 3 and 4 were previously pending. Applicants added new claims 22 and 23. Claims 1, 3, 4, 22 and 23 are pending and will be examined.
- 3. Applicants' arguments and a declaration of Dr. Davin Dillion submitted on March 14, 2006, overcame the rejection of claims 1, 3 and 4 under 35 U.S.C. 101, utility, and under 35 U.S.C. 112, first paragraph, enablement.
- 4. This office action contains new grounds for rejection.

## Information Disclosure Statement

5. The information disclosure statement (IDS) submitted on March 14, 2006 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

#### Claim Interpretation

6. Applicants did not define the term "complement" with respect to the polynucleotide, therefore it is considered as any two or more nucleotides complementary to SEQ ID NO: 305.

## Claim Rejections - 35 USC § 112

7. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 1637

8. Claims 1, 3, 4, 22 and 23 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In analysis of the claims for compliance with the written description requirement of 35 U.S.C. 112, first paragraph, the written description guidelines note regarding genus/species situations that "Satisfactory disclosure of a "representative number" depends on whether one of skill in the art would recognize that the applicant was in possession of the necessary common attributes or features of the elements possessed by the members of the genus in view of the species disclosed." (See: Federal Register: December 21, 1999 (Volume 64, Number 244), revised guidelines for written description.)

All of the current claims encompass a genus of nucleic acids which are different from those disclosed in the specification. The genus includes variants for which no written description is provided in the specification. This large genus is represented in the specification by only the particularly named SEQ ID NO: 305. Claim 1 reads on any polynucleotide comprising any two nucleotides of SEQ ID NO: 305. Therefore, if the polynucleotide is 100 bp long, there are 98 unspecified nucleotides within this sequence, and therefore there are 498 or about 1x 1059 such sequences. Thus, applicant has express possession of only one particular sequence in a genus which comprises hundreds of billions of different possibilities. Here, no common element or attributes of the sequences are disclosed, not even the presence of certain domains. No structural limitations or requirements which provide guidance on the identification of sequences which meet these functional limitations is provided. Further, these claims encompass alternately spliced versions of

Application/Control Number: 10/010,742 Page 4

Art Unit: 1637

the proteins, allelic variants including insertions and mutations, inactive precursor proteins which have a removable amino terminal end, and only specific amino acid sequences have been provided. No written description of alleles, of upstream or downstream regions containing additional sequence, or of alternative splice variants has been provided in the specification.

It is noted in the recently decided case <u>The Regents of the University of California v. Eli</u>
<u>Lilly and Co. 43 USPQ2d 1398 (Fed. Cir. 1997)</u> decision by the CAFC that

"A definition by function, as we have previously indicated, does not suffice to define the genus because it is only an indication of what the gene does, rather than what it is. See Fiers, 984 F.2d at 1169-71, 25 USPQ2d at 1605-06 (discussing Amgen). It is only a definition of a useful result rather than a definition of what achieves that result. Many such genes may achieve that result. The description requirement of the patent statute requires a description of an invention, not an indication of a result that one might achieve if one made that invention. See In re Wilder, 736 F.2d 1516, 1521, 222 USPQ 369, 372-73 (Fed. Cir. 1984) (affirming rejection because the specification does "little more than outlin[e] goals appellants hope the claimed invention achieves and the problems the invention will hopefully ameliorate."). Accordingly, naming a type of material generally known to exist, in the absence of knowledge as to what that material consists of, is not a description of that material. "

In the current situation, the definition of the complement of SEQ ID NO: 305 lacks any specific structure, is precisely the situation of naming a type of material which is generally known to likely exist, but, except for one specific complement (full complement), is in the absence of knowledge of the material composition and fails to provide descriptive support for the generic claim to "an isolated polynucleotide comprising a complement of SEQ ID NO: 305", for example.

It is noted that in Fiers v. Sugano (25 USPQ2d, 1601), the Fed. Cir. concluded that

"...if inventor is unable to envision detailed chemical structure of DNA sequence coding for specific protein, as well as method of obtaining it, then conception is not achieved until reduction to practice has occurred, that is, until after gene has been isolated...conception of any chemical substance, requires definition of that substance other than by its functional utility."

Application/Control Number: 10/010,742

Art Unit: 1637

The current situation is a definition of the compound solely but its functional utility, as a complement, without any definition of the particular deletions claimed.

In the instant application, specific SEQ ID NO: 305 is described. Also, in <u>Vas-Cath Inc. v.</u>

<u>Mahurkar</u> (19 USPQ2d 1111, CAFC 1991), it was concluded that:

"...applicant must also convey, with reasonable clarity to those skilled in art, that applicant, as of filing date sought, was in possession of invention, with invention being, for purposes of "written description" inquiry, whatever is presently claimed."

In the application at the time of filing, there is no record or description which would demonstrate conception of any nucleic acids other than those expressly disclosed which comprise SEQ ID NO: 305. Therefore, the claims fail to meet the written description requirement by encompassing sequences which are not described in the specification.

# Claim Rejections - 35 USC § 102

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

10. Claims 1, 3, 4, 22 and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by Yue et al. (WO 01/90334).

Regarding claim 1, Yue et al. teach a polynucleotide with SEQ ID NO: 23, which is 100% identical to SEQ ID NO: 305 (see sequence alignment).

Regarding claims 3 and 4, Yue et al. teach a vector comprising the polynucleotide linked to an expression control sequence and a host cell comprising the vector (page 51, lines 26-30; page 53-56).

Regarding claims 22 and 23, Yue et al. teach a composition comprising the polynucleotide with a physiologically acceptable carrier and immunostimulant (page 62, lines 23-29; page 71, lines 32-34).

11. No claims are allowed.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Teresa E. Strzelecka whose telephone number is (571) 272-0789. The examiner can normally be reached on M-F (8:30-5:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Benzion can be reached on (571) 272-0782. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
